

Enhancing interactions with innovative technology

VitalsTM is a service designed to help individuals with various conditions and disabilities communicate with first responders, educators and providers in real-time - allowing for safer interactions, deeper understanding and an enhanced person-centered-care approach.

The VitalsTM service

Profile of critical information

The VitalsTM service allows an individual or caregiver to maintain a personalized profile that can be voluntarily shared with authorized first responders and health care professionals with the ability to be updated in real time.

Individuals carry a VitalsTM beacon

Individuals carry a VitalsTM beacon assigned to them by their family member or caregiver with their personalized profile of information to help authorized first responders better communicate and engage with them.

Interactions improve; crises are averted

Now, first responders and health care professionals can better recognize, communicate, de-escalate and more safely resolve incidents, especially with individuals in crisis that don't always have a voice.

“

As an advocate for my son and now for myself, you're always looking for ways to reduce stress and try to tell people what's going on without re-living all the details every time you turn around. During an emergency or high adrenalin moment, it's difficult to remember the details, and that's what I love most about the VitalsTM service! We don't have to, all the crucial information is saved and readily available.”

- Parent and self-advocate

A real-time resource bridging the communication gap between first responders and individuals with various conditions and disabilities.

Features

Primary and Secondary Conditions

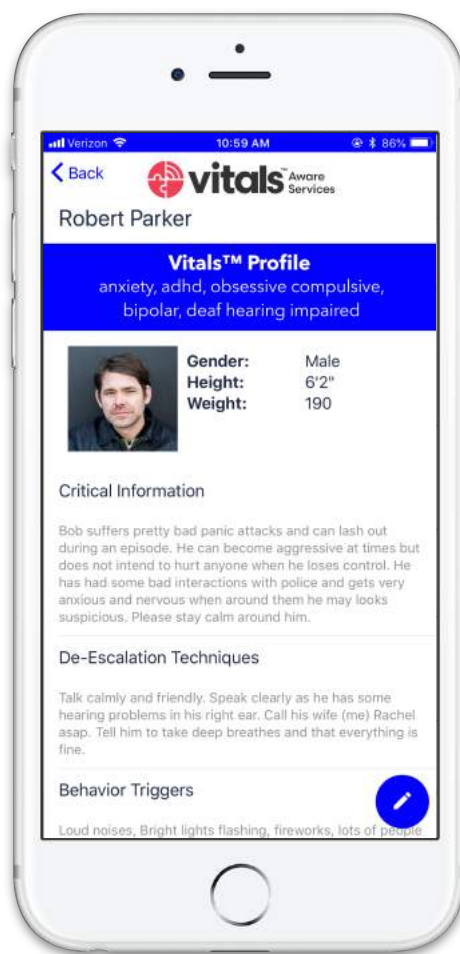

Users and caregivers can provide a description of the individual's primary and secondary conditions.

De-escalation Techniques

Users can supply a list of behavior triggers and proven de-escalation techniques, ensuring that safety professionals have the appropriate information on how to respond to a vulnerable individual.

Audio/Visual Files

Upload video and audio messages of a loved one or a favorite video to help calm and de-escalate when in crisis

Uploadable Documents

Include important documents to any profile such as: health directives, doctors orders and important care instructions.

Medical Information

Caregivers can provide any medical information about the individual to ensure that proper care is provided.

Medication

Individuals and caregivers can upload a list of medications on each Vitals™ profile.

Caregiver Contact Information

Each profile has specified emergency contacts giving first responders and care providers easy access to call in a crisis situation.
