

FIRSTNET®

MISSION CRITICAL

PUSH TO TALK

**When Your Communications are
Mission-Critical**

We've designed the FirstNet portfolio of **mission-critical push-to-talk solutions** with public safety in mind. They are mission-driven and mission-ready:

CAPABILITIES

Meeting public safety's requirements for reliable voice, data and video group communication.

Providing users the highest level of traffic prioritization* on the FirstNet network.

COVERAGE

Nationwide coverage on the only network built with and for public safety.

Expanding beyond the limits of local Land Mobile Radio (LMR) systems.

CONSISTENCY

Giving FirstNet users access to the FirstNet Response Operations Group.

Adopting LMR principles for MCPTX solutions and enhanced video, text and location services.

As a data service, providing always-on priority for consistent performance.

COLLABORATION

Modernizing LMR with added video, location and data services while retaining two-way radio PTT capabilities.

Helping facilitate mutual aid requests and communication between first responders and command staff on different platforms.

SECURITY

Engineered and deployed with geo-redundancy to meet public safety's requirements for performance and reliability.

Highly secure with a Security Operations Center that monitors the network 24/7/365 to guard against physical and cyber threats.

CONTROL

Agency administrators control virtually every aspect of the solutions and can dynamically adjust and provision talk group functions.

Enabling inter-agency resource delegation and sharing for near real-time cross-collaboration.

Emulating two-way radio features to improve first responders' access to information.
