

FirstNet Push-to-Talk (PTT) May 2023 Enhancements

Release 3.5 for iOS

FirstNet PTT 3.5 for iOS includes all-new location and mapping services, improved emergency services and many other usability features.

Note that these features are already supported on Android devices.

New client features

Location sharing	Visually share your location and know where other team members are, through secure geo-location and ESRI maps.
PTT and video calling via map	Initiate a 1:1 or ad hoc group PTT or video call by selecting any visible users on the map. Send text messages the same way.
Screenshot annotation	Take screenshots of any image or video and add comments to provide more precise information.
Out-of-coverage tone	Users can be alerted when service disconnects and/or reconnects due to coverage conditions.
Video recording	Enhances the streaming video service where users can record and save video locally to the device gallery for later replay or sharing. Optional service to the standard FirstNet PTT service.
Emergency alerts	Improved emergency alerting – and options to self-manage it - means you're always aware of ongoing emergencies.

New administration features

90 groups per user	Users can be a member of 90 groups, both intra- and inter-agency (inter-agency via Mutual Aid Request)
Mutual control	Added user level permission allows individuals to be added or removed from the pool of available users by the Admin.

To take advantage of these new features, be sure to download the latest FirstNet PTT client (Version **4.3.1** from the App Store, Version 4.5.00.61 from Google Play). See firstnet.com/FirstNetPTT/devices to view all devices certified for FirstNet PTT.

If you have any questions about FirstNet PTT, please contact your FirstNet representative or FirstNet Customer Service on 800-574-7000.
